ERGOlite Harness Range

1000 ERGOlite Ultra Full Body Fall Arrest Harness

1104 ERGOlite Full Body Fall Arrest Harness

1300 ERGOlite Full Body Fall Arrest Harness

1100 ERGOlite Full Body Fall Arrest Harness

1107 ERGOlite Full Body Fall Arrest Harness

User Weight Limits

All harnesses = 160kg. Refer to specific lanyard and inertia reel data for force calculations.

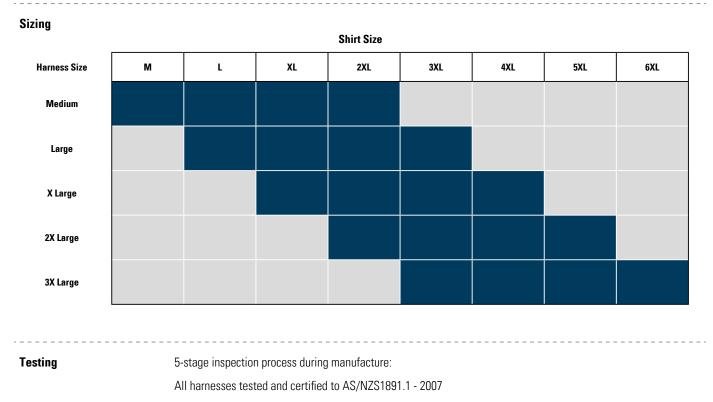

Attachment Hardware

Cranked (bent) for ease of attachment Polished for smoother edges Clear anodised for corrosion resistance	
Clear anodised for corrosion resistance	
Minimum tensile strength 22kN (5M–5000lb)	
Proof loaded to 16kN	
Ring internal diameter 54mm	
Webbing slot size 16 x 54mm	
Compatible with Gotcha™ Rescue Kit	
Laser etched with batch number and rating	
Front D Forged aluminium	
Polished for smoother edges	
Clear anodised for corrosion resistance	
Minimum tensile strength 22kN (5M–5000lb)	
Proof Loaded to 16kN	
Ring internal diameter 46mm	
Webbing slot size 11mm x 46mm	
Compatible with Gotcha™ Rescue Kit	
Laser etched with batch number and rating	
Buckles 2 bar buckles for easy adjustment	
17.8kN/4000lb	
Clear annodised for increased corrosion resistance	
Webbing slot size 46mm	
Stamped with batch number and rating	
Exceed AS/NZSS 1891.1	
Buckles 2 + 3 Bar Buckles	
1000 ERGOlite Ultra 17.8kN/4000lb	
Clear annodised for increased corrosion resistance	
Webbing slot size 46mm	
Stamped with batch number and rating	
Exceed AS/NZSS 1891.1	

Quick Connect Buckles (Except 1000 ERGOlite Ultra)	Double action pawls						
	"Green light" safe connection indicator						
	Lightweight aluminium						
	Annodised for corrosion resistance Intergrated roll buckle adjuster						
	Webbing	Colourfast polyester high tensile					
Heat set for lower friction co-efficient – longer wear							
Light (UV) degradation certified to AS/NZS1891.1							
Minimum tensile strength 30kN							
Lay flat – non-roping							
Sewing	Hight tensile polyester light fast, UV resistant thread						
	Load bearing seams sewn with high density, multi-bar tack patterns for extra wear and ease of inspection						
	Load bearing seams sewn on computerised lock-stitch machines for consistency and security						
	Contrasting colour for ease of inspection						
	Non load-bearing patterns (labels, web end fold backs, decorative etc) flat manual sews						
	All finished with over-stitching						
Labels	Compliance labels protected in openable pouch						
	UV resistant PVC						
	Thermal transfer printing						

Webbing KeepersNylon high density elastic for easy stowage of excess webbingContrasting black for quick identificationRubber pull tabs on all end straps

Suspension Trauma Relief Straps	20mm nylon webbing					
	2-part hook and loop design					
	Housed in individual zippered soft pouches					
	Attached to harness via reevable loop and positioning press studs Length adjusting increments 185mm					
		· · · · · · · · · · · · · · · · · · ·				
Waist and Buttock Padding	Motion activated ventilation bellows effect					
, adding	Composite foam and mesh					
	Moulded and formed for greater eronomics					
	Nylon abrasion resistant outer shell					
	Nylon mesh, breathable inner lining					
	Stiffened and reinforced for additional support					
Confined Space	UV resistant polyester tubing					
Attachment Loops	Tight and small enough to fit snap hooks					
(except ERGOlite 1000)	Colour contrasted for ease of identification					
	Must be used together					
	Clearly labelled					
Construction	Original ERGO Euro style geometry					
	3 layer pocket webbing supporting load bearing Chest strap for front D					
	ERGOnomic, pull up adjustment at front shoulder straps					
	Sub -pelvic strap to minimise peel out					
	Fully adjustable shoulder, leg and chest straps					
	Leg straps fixed at hips – no excessive tightening around thighs in the event of an arrested fall					
	Front D allows for easier attachment with remote rescue kits					
	Centralised front D gives even loading					

100%	visual	inspection

Rear D and front D's tested to dyamic 3.8m head up and head down

Rear D and front D's tested static 15kN head up and 10kN head down

Side Ds – 1.8m drop test on pole 12kN static test at side Ds and rings

Confined space loops – 12kN static test through spreader bar

Webbing UV degradation tested

Certification

Designed, tested and certified to AS/NZS1891.1-2007

Common Features

Lightweight and comfortable Easy to fit and adjust Individually serial numbered

	1000 ERGOlite	1100 ERGOlite	1104 ERGOlite	1300 ERGOlite

Types of Attachment Points

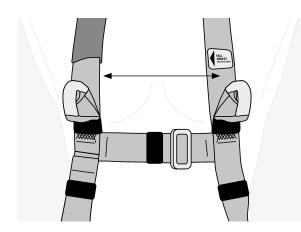

- 1 **Confined space attachment loops** Reverse folded loops to eliminate snagging and minimise metal components in contact with the body. Both loops must be used together.
- 2 **Front fall arrest D ring** For versatility and ease of rescue.

3

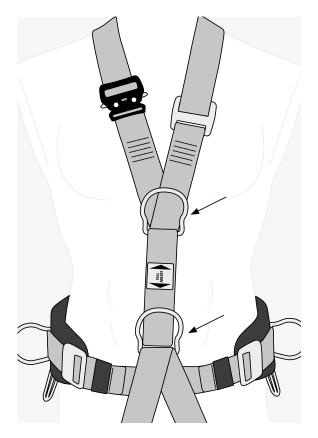

Pole strap attachment D rings Easy to locate and connect to.

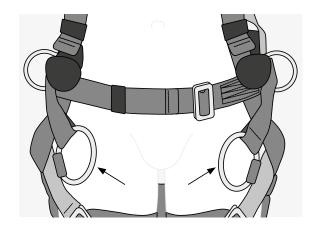

Rear fall arrest D ring Easy to locate and connect.

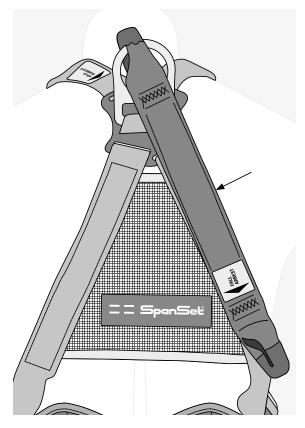

Front Fall Arrest Loops (Both loops must be used together)

Front Fall Arrest Attachments (can also be used for abseiling, work positioning or belay work)

Auxiliary Pole Strap Rings (Both Ds must be used)

Dorsal/Rear (Fall Arrest) Extension Strap

WARNING: ONLY USE ATTACHMENTS THAT ARE SPECIFICALLY LABELLED FOR THE APPLICATION

Fitting Instructions

Vest Style Harnesses

Hold harness by the Rear D with all straps undone

Place both shoulder straps over the shoulder as in donning a vest

Connect chest buckle, ensuring that green spot is seen in the receiver window. Tighten strap.

If a waist belt is fitted, connect and tighten

Connect leg buckle

Tighten leg strap

Connect opposite leg strap

Tighten straps and retain free webbing within the elastic web tidy

Fitted harness should be snug and firmly fitted, particularly the leg straps

Step-in Style Harnesses

Hold harness by the shoulder straps and disconnect the chest fast release buckle

Place left leg through the left leg strap

Place the right leg through the right leg strap

Pull the harness upwards to waist level

Place the left shoulder strap over the shoulder

Repeat for right shoulder strap and connect the buckle. Ensure green spot can be seen in the receiver window

Tighten waist strap by pulling both sides

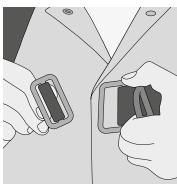

Tighten leg straps

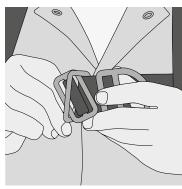

Fitted harness should be snug and firmly fitted, particularly the leg straps

Buckle Connection Instructions

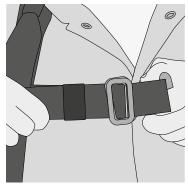

2-3 Bar Buckles

Bring the 2 buckles together, ensuring there are no twists in the webbing

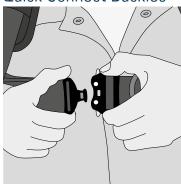

Turn the 3 bar buckle and push it through the 2 bar buckle

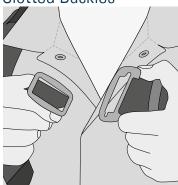

Ensure both buckles lay flat against one another and tension the strap

Quick Connect Buckles

Align the tongue with the slot in the receptor buckle and insert

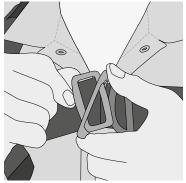

Slotted Buckles

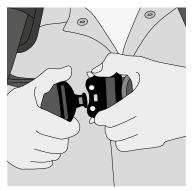

Bring the 2 buckles together, ensuring there are no twists in the webbing

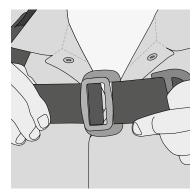

Push together until you hear a distinct click and the green mark appears in receiver window

Push the smaller buckle through the slot in the larger buckle

To release, push the two side tabs simultaneously and separate the buckles

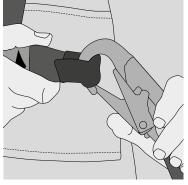

Ensure both buckles lay flat against one another and tension the strap

Dorsal Extension

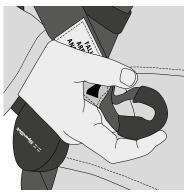

The dorsal extension is located at the rear of the harness, held in place by velcro strip

Connect attachment hardware to the eye, making a visual check for secure connection

Remove dorsal extension from velcro strip and bring under the armpit

Ensure the eye is open to receive the connection hardware

Note: All SpanSet dorsal extensions are deliberately located on the rear of the harness in order to keep an attached lanyard away from

the neck and face.

The harness is correctly fitted (donned) when:

- The dorsal D ring (rear) is between the shoulder blades
- The shoulder straps are firm
- The chest strap is firm and located mid-chest
- The leg straps are firm
- There are no twists in any straps
- The butt strap is located just below the buttocks
- Spare strap ends are tucked away.

Types of Harnesses and Environmental Conditions

ERGOplus and ERGOiplus Harnesses

These premium harnesses are padded for comfort and feature quick connect buckles for convenience when donning. For professional users in dry conditions where no excessive dirt, mud and grime build up is experienced. ERGOiplus also features iWeb inspectable webbing with Xtreme Guard coating

ERGO Harnesses

These are the workhorses in the range and are best suited for dirty and harsh conditions by professional operators who appreciate no nonsense reliability. They feature the most

reliable buckle system, being the 2 and 3 bar buckle, and don't feature any moving parts or unnecessary padding.

Compliance Harnesses

Tradie and EWP (also known as Spectre) harness are compliant entry level harnesses without many of the features of the previous harness ranges such as confined space loops, centre front D and suspension trauma straps

HotWorks Harnesses

These harnesses are for use around welding, grinding and similar hot work. They are made from heat resistant materials including the padding and have a lower total cost of ownership compared to polyester harnesses which are susceptible to heat.

WaterWorks Harnesses

These are for use around constantly wet areas and confined spaces and utilise all stainless steel fittings for longevity. Additionally they have Xtreme Guard coated webbing for water oil and dirt resistance.

ToughWorks

These are PVC or polyurethane coated harnesses for added resistance to paint, abrasion and excessive wear.

StageWorks

These particular harnesses have little or no reflectivity for working backstage and aloft at productions where the riggers and support personnel need to work at height but remain inconspicuous.

Belts

Waist belts one their own must not be used for fall arrest applications. SpanSet generally only manufacture miners' belts, to carry battery packs and self-rescuer devices. These belts may be integrated into full body harnesses however only the load bearing and tested harness attachment points listed in AS/NZS 1891.1 may be utilised in fall, rescue or suspension applications.

Maximum User Weights

SpanSet harnesses are rated in excess of 150kg.

General Maintenance

- A visual check should be carried out before and after daily use, and a 6 monthly periodic inspection is to be performed by a competent person and the results recorded.
- Clean prior to inspection.

Checklist for Inspection of Harnesses and Pole Straps

The following points should be checked before use:

- Check all webbing for effects of cuts, tears, abrasion, heat, chemicals, corrosives or solvents, hardening, excessive stretching, glazing due to friction, excessive wear or fuzziness, discolouration due to chemical contamination or prolonged ultraviolet exposure, excessive stiffness due to overloading, possibly as a result of a fall.
- Check all stitch blocks for broken, cut or worn stitching and damage due to heat, corrosives, solvents or mildew
- Check all buckles and D-rings for deformation, distortion, corrosion, wear and correct orientation
- Ensure the protective sleeve is in place on the pole strap
- Check ID number and Standards logo for legibility
- Check Date of manufacture life shall not exceed 10 years
- Check for evidence of a fall. Must be withdrawn from service after a fall and destroyed if any damage has been sustained
- Check with the user for possible causes of damage.

If any of these points are not satisfactory then the harness should be destroyed.

Inspecting iWeb Enabled Products

Webbing with iWeb is woven with a contrasting (red) core of load bearing webbing which runs the full width and length of the webbing. To inspect, simply look for signs of red in any abrasion point, scuff, or cut on the surfaces or edges. This gives an objective inspection and discard criteria for both the user and the competent inspection person to apply.
